

DryExx™ GF Reduced Water Usage

while also improving cleaning, safety & bottle appearance

Solution Story

CHALLENGE

A winery and bottling facility bottling 13,000-18,000 bottles/hour at 60-86° F was using a wet lubrication. The winery was looking for ways to reduce water usage and improve the bottling hall hygiene environment.

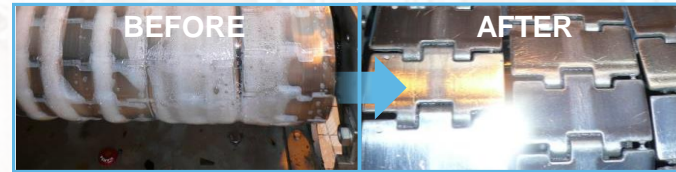

SOLUTION

The facility partnered with Ecolab to switch from a wet lubricant to DryExx GF, a highly effective, semi-dry conveyor lubricant which eliminates the majority of water needed while maintaining hygiene and efficiency.

RESULTS

Significantly **REDUCED** conveyor lubrication while meeting required hygiene standards

The bottling hall floor is drier, reducing potential for worker slips and falls

IMPROVED bottle appearance
