

Optimize Your Feedstock for Greater Flexibility and Compatibility with FeedFlex™

Proprietary digital technology provides actionable insights for crude oil compatibility to help predict and prevent potential issues by adjusting blending ratios, operational controls, and chemical injection rates.

- Portable digital analyzer simulates feed management and delivers near real-time onsite testing, eliminating the time and expense to ship test samples and wait for results.
- Enables you to run various blending scenarios to optimize ratios before you process raw crudes.
- Tracking capability allows you to maximize feedstock blending flexibility and confidently process novel opportunity crude oils.
- Insights enable you to make decisions quickly and help minimize operational risks due to asphaltene instability.
